

Signal Booster Installation Guide

Sleek®

**Dual-Band Smart Technology II™
Cellular Signal Booster with Built-in Antenna**

Model # 2B5225 FCC ID: PW02B5225
IC: 4726A-2B5225 U.S. Patent No. 7,684,838; D626,953
2B3925 not for sale in US or Canada

The weak link in cell phone systems is the low signal power of the cell phone. The Sleek boosts the cell phone power many times.

Signal Booster Specifications	Back Cover

To boost your phone's signal power, the phone must be placed in the Sleek cradle. For best results, use a Bluetooth® headset or hands free device, while the phone remains in the Sleek.

Note: This manual contains important safety and operating information. Please read and follow the instructions in this manual. Failure to do so could be hazardous and result in damage to your Sleek.

Appearance of device and accessories may vary.

 **Wilson**
Electronics, Inc.

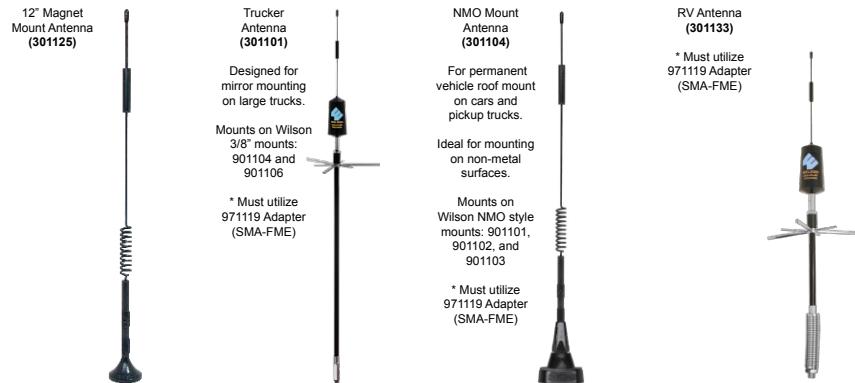

Inside this Package

NOTE: If product# 815225 was ordered, package will only include Sleek wireless Signal Booster cradle, power supply, and mounting bracket.

Antenna Options

Although the convenient Mini-Magnet Mount Antenna may have been included with your kit, Wilson Electronics offers a wide variety of Outside Antennas to help you customize your Signal Booster for a specific application. All models shown below double the power to the cell tower compared to the Mini-Magnet antenna. See your dealer or visit www.WilsonElectronics.com for more information.

Accessories for your Sleek®

Appearance of device and accessories may vary.

General

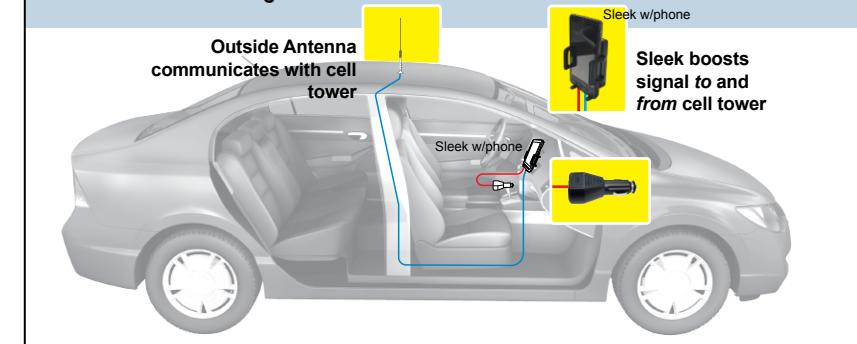

Your Wilson Electronics Sleek has been carefully engineered to significantly improve the performance of your phone. Together with an Outside Antenna, the Sleek's state-of-the-art circuitry is designed to increase your phone's signal to and from the cell tower. The Sleek reduces disconnects and dropouts and increases data communication rates on 2G and 3G networks.

How it Works

With the phone in the cradle and while using a wireless Bluetooth headset (or hands free device) the Outside Antenna collects the cell tower signal and sends it through the cable to the Sleek. The signal is then boosted by the Sleek and sent to the phone. When the phone transmits, the signal is picked up wirelessly and boosted by the Sleek and broadcasted back to the cell tower through the Outside Antenna.

NOTE: The cell phone must be placed in the cradle to work properly.

Vehicle Installation Diagram

Warning: DO NOT use phone covers that have chrome or any other metallic surface. It may block cellular signals

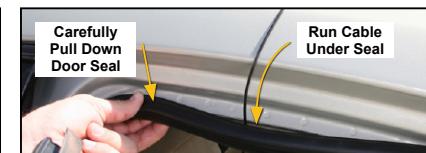

Vehicle Installation

1. Install the Outside Antenna

To receive the best cell signal, select a location for the Outside Antenna that is preferably in the center of the vehicle's roof, 12 inches away from any other antennas, free of obstructions, and at least 6 inches from the rear or side windows or sunroof.

The outside antenna must be installed vertically. Antenna performance will be degraded if the antenna is not vertical.

The antenna cable is small yet strong enough that it may be shut in most vehicle doors without damaging the cable.

For a more professional looking installation, run the antenna cable under the door seal. Carefully pull down the door seal. Run the cable under the seal and push the seal back into place. This prevents constant wear and tear on the cable as the door opens and closes. The antenna cable is small enough to easily tuck under the door seal or plastic molding.

RF Safety Warning: The Outside Antenna must be either a Wilson Electronics Magnet-Mount or Mini-Magnet Mount antenna and requires at least an 8 inch separation distance from all persons. Other Outside Antennas may be used with fixed building installations provided that (a) they are located with at least a 30 inch separation distance from all persons, (b) their gain less cable loss does not exceed 15 dBi, and (c) they are not operating in conjunction with any other antenna or Signal Booster.

2. Attach the Mounting Bracket

A mounting bracket is provided for attaching the Sleek to your vehicle's dash. Other options are also available from Wilson Electronics.

ADHESIVE BRACKET- Included in this package

1. Clean the area where the bracket is to be mounted with the supplied alcohol wipe. Allow to dry.
2. Peel the backing to expose the adhesive and press the bracket onto the desired location in the vehicle. **Note:** Be sure the tab is positioned vertically, not horizontally.
3. Allow the adhesive to cure for 24 hours before you attach the Sleek.

3. Attach the Sleek® to the Bracket

Once you have installed the bracket in the desired location, and waited 24 hours for adhesive to cure, attach the Sleek by aligning the rectangular hole on its back with the tab on the mount bracket, grasping the sides of the Sleek, and sliding it downward approximately ¼ inch into place.

Once the cradle is attached, you can adjust the angle of the adhesive bracket by applying gentle pressure to the top or bottom of the Sleek. The bracket is designed to swivel when the knurled nut is loosened for greater adjustability of the Sleek viewing angle. To lock bracket into position, tighten large nut.

4. Attach the Outside Antenna cable to the Sleek®

Attach the cable from the Outside Antenna to the antenna connector on the Sleek. (See Figure 1)

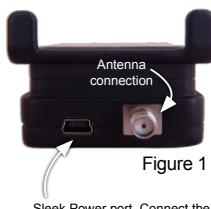

Figure 1

Sleek Power port. Connect the Wilson Electronics's power supply

Power up the Wilson Electronics Sleek®

Accessory port to power your phone, some adapters available through Wilson Electronics at 866-294-1660. (See Figure 2)

Connect the mini-USB plug on the power cable to the Sleek's mini USB port located on the bottom of the Sleek and insert the adapter into the vehicle power adapter of your vehicle. The Sleek may remain on all the time. However, leaving the Sleek on in a vehicle when it is not running can discharge the battery in a day or two.

Note: The 12V DC power source on many vehicles is shut off with the ignition key.

Warning: Use only the supplied Wilson Electronics power supply.

Warning: Make sure the Outside Antenna cable is connected before powering up the Sleek.

Figure 2

Accessory USB Power port

Adjusting the Sleek® Arms

Included with your Sleek are various sized arms, which will provide you with multiple options to customize the Sleek to fit your phone.

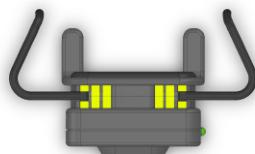

1. Change arms

Gently grab the arm and lift upward until the arm slides free from the Sleek.

2. Reposition arms

Position the arm above a different slot on the Sleek (indicated by the yellow in the drawing). Gently slide the arm down until the arm is firmly in place.

NOTE: The cell phone must be placed in the Sleek to work properly. Use a Bluetooth or wired hands free device.

Understanding the Sleek® Lights

Separation of the Sleek and the Outside Antenna is very important. In a vehicle, the metal roof acts as a barrier and helps shield the two antennas from each other, preventing oscillation (feedback).

Oscillation can occur when the roof mounted antenna is too close to the Sleek inside the vehicle. An oscillation (or feedback) in the Sleek is similar to when a microphone is too close to a speaker in a sound system, resulting in a loud whistle. An oscillation in the Sleek, if allowed to occur, can affect nearby cell towers' ability to handle calls.

Green light is on : Sleek is operating properly

SYMPTOM: No light, or light always off

1. Make sure that the power supply for the Sleek is functioning properly, by making sure the light located on the power supply is lit.
2. If the DC plug-in power supply is properly inserted, but the plug's light doesn't come on, then check the 12 volt power from the car socket, and check the fuse in the DC plug-in power supply.

SYMPTOM: Red light is on

1. If the light is red, the Sleek has powered down to protect the cell tower. See section above "Separation of Sleek and the outside antenna is very important." If the light turns red, the Sleek has powered down to protect the cell tower from oscillation. The red light indicates the outside roof mounted antenna needs to be moved farther from the Sleek. In a vehicle installation, move the Outside Antenna on the roof of the car farther to the rear of the car, but at least 6 inches from the rear or side windows or sunroof. To reset the Sleek, disconnect and reconnect the power supply. If the light is now green, the Sleek is working properly. If the red light is still on, move the Outside Antenna farther away and repeat the process.

Troubleshooting

SYMPTOM: No increase in bars

1. Make sure that the antenna connector is tight.
2. **The cell phone must be placed in the Sleek cradle to amplify properly.**
3. Call Wilson Electronics Technical Support at 866-294-1660.

⚠ Warning: DO NOT use phone covers that have chrome or any other metallic surface. It may block cellular signals

In-Building Installation

Installing a Wilson Electronics Outside Antenna in a Building

Follow the specific antenna instructions included with the Outside Antenna (sold separately except for certain kits). These instructions assume that you are using a Wilson Electronics Mini-Magnet Mount Antenna and the optional suction cup window bracket.

To receive the best signal, select a window on the side of your building where your outside signal is the strongest.

Attach the suction cup bracket to the inside of a window so that the cable will reach the location of the Sleek. Place the bracket as high on the window as possible for best performance.

Once the bracket is in place, attach the magnet base of the antenna to the flat surface of the bracket. **Note:** The antenna must be installed vertically. Signal performance will be degraded if the antenna is not vertical.

Installing the Wilson Electronics Sleek® Signal Booster in a Building

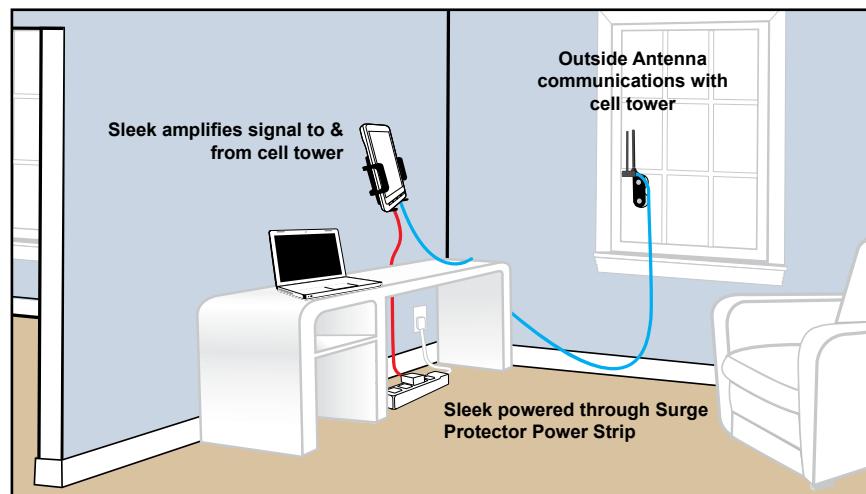

The Wilson Electronics Sleek may be placed in any convenient indoor location, such as a desk or tabletop. The cell phone or data card must be in the cradle and a Bluetooth headset used for voice communications.

Attaching the Antenna

Once you have selected the location for the Sleek, run the cable from the outside antenna and attach it to the SMA connector on the bottom of the Sleek.

Note: The cell phone must be placed in the Sleek cradle to amplify properly.

Warning: The Sleek and the Outside Antenna must have a minimum separation of 3 feet to prevent oscillation.

Wilson® Electronics recommends that all AC power supplies for home electronics be plugged into a Surge Protector Power Strip.

Warnings

Warning: Do not plug in the power supply until the Outside Antenna cable is attached to the Sleek.

Warning: **RF Safety:** The Sleek cradle/Signal Booster must be installed with a separation of at least 8 inches from all persons and must not be located in conjunction with any other antenna or Signal Booster.

Warning: **RF Safety:** The FCC requires that a cell phone with cradle attached may only be used with the cradle mounted as illustrated in this installation guide. A cell phone held near the ear must be without the cradle attached.

Warning: **RF Safety:** The Outside Antennas authorized for use with this Signal Booster are shown on page 1 of this guide. Other antennas may be used, but only in fixed installations when located outside of a building or structure (not in mobile/ portable installations), provided that:
(a) antenna location ensures at least a 30 inch separation distance from all persons,
(b) antenna gain less cable loss does not exceed 15 dBi, and
(c) such antennas are not operating in conjunction with any other antennas, or transmitting devices.

Warning: DO NOT use phone covers that have chrome or any other metallic surface. It may block cellular signals

30-Day Money-Back Guarantee

All Wilson Electronics products are protected by Wilson Electronics 30-day money-back guarantee. If, for any reason, the performance of any product is not acceptable, simply return the product directly to the reseller with a dated proof of purchase.

1-Year Warranty

Wilson Electronics Signal Boosters are warranted for one (1) year against defects in workmanship and/or materials. Warranty issues may be resolved by returning the product directly to the reseller with a dated proof of purchase.

Signal Boosters may also be returned directly to the manufacturer at the consumer's expense, with a dated proof of purchase and a Returned Material Authorization (RMA) number supplied by Wilson Electronics. Wilson Electronics shall, at its option, either repair or replace the product. Wilson Electronics will pay for delivery of the repaired or replaced product back to the original consumer within the continental United States.

This warranty does not apply to any Signal Boosters determined by Wilson Electronics to have been subjected to misuse, abuse, neglect, or mishandling that alters or damages physical or electronic properties.

RMA numbers may be obtained by phoning Technical Support at 866-294-1660.

About Wilson Electronics

Wilson Electronics, Inc. has been a leader in the wireless communications industry for over 40 years. The company designs and manufactures Signal Boosters, antennas and related components that significantly improve cellular phone signal reception and transmission in a wide variety of applications, both mobile (marine, RV, vehicles) and in-building (home, office, M2M).

With extensive experience in antenna and Signal Booster research and design, the company's engineering team uses a state-of-the-art testing laboratory, including an anechoic chamber and network analyzers, to fine-tune antenna designs and performance. For its Signal Boosters, Wilson Electronics uses a double electrically insulated RF enclosure and cell tower simulators for compliance testing.

Wilson Electronics Signal Boosters feature patented Smart Technology II™ that enables them to automatically adjust their power based on cell tower requirements. By detecting and preventing oscillation (feedback), signal overload and interference with other users, these Smart Technology II™ Signal Boosters improve network cell phone areas without compromising carrier systems.

All products are engineered and assembled in the company's 55,000-square-foot headquarters in St. George, Utah. Wilson Electronics has product dealers in all 50 states as well as in countries around the world.

Signal Booster Specifications

	Sleek
Model Number	2B5225
Connectors	SMA Female
Impedance (input/output)	50 ohms
Frequency	824-894 MHz / 1850-1990 MHz
Passband Gain (nominal)	20 dB (typical) / 30 dB (maximum)
20 dB Bandwidth (nominal)	
800 MHz (uplink/downlink)	43 MHz / 45 MHz
1900 MHz (uplink/downlink)	112 MHz / 84MHz
Power output for single cell phone (uplink)	800 MHz 1900 MHz
CDMA	28.9 dBm 31.8 dBm
GSM	30.9 dBm 32.6 dBm
EDGE	30.9 dBm 31.9 dBm
WCDMA	30.13 dBm 31.4 dBm
Power output for single received channel (downlink)	800 MHz 1900 MHz
CDMA	-9 dBm 1.0 dBm
GSM	-1.3 dBm 1.8 dBm
EDGE	-1.3 dBm 2.1 dBm
WCDMA	.32 dBm 2.3 dBm
Power output for multiple received channels (downlink). The maximum power is reduced by the number of channels:	Maximum Power ³
Number of channels	
2	800 MHz 1900 MHz -1.1 dBm 2.2 dBm
3	800 MHz 1900 MHz -4.7 dBm -1.4 dBm
4	800 MHz 1900 MHz -7.2 dBm -3.9 dBm
5	800 MHz 1900 MHz -9.1 dBm -5.8 dBm
6	800 MHz 1900 MHz -10.7 dBm -7.4 dBm
Noise Figure (typical)	3 dB nominal
Isolation	> 40 dB
Power Requirements	5V DC, 1A

Notes:

1. Nominal gain is the maximum gain at any frequency in the passband.
2. Nominal bandwidth is the difference between two frequencies that are adjacent to the passband where the amplification is 20 dB lower than the passband amplification. One of the frequencies is lower than the passband and the other is higher.
3. The Manufacturer's rated output power of this equipment is for single carrier operation. For situations when multiple carrier signals are present, the rating would have to be reduced by 3.5 dB, especially where the output signal is re-radiated and can cause interference to adjacent band users. This power reduction is to be by means of input power or gain reduction and not by an attenuator at the output of the device.
4. The maximum power for 2 or more simultaneous signals will be reduced by 6 dB every time the number of signals is doubled.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. Changes or modifications made that are not expressly approved by Wilson Electronics could void authority to operate this equipment.

Wilson Electronics poseña autorización para operar este equipo
 conforme con la parte 15 de los Reglamentos de FCC. Es una combinación de partes que están expuestas por
 interiores que no cumplen las diferencias entre los límites establecidos por la FCC. Esas diferencias se deben a la selección de partes que cumplen las especificaciones de la FCC.

4. La potencia máxima de entrada o salida provoca un incremento de 6 dB sobre la selección de banda de alta eficiencia.
 de la potencia máxima de entrada o salida garantiza un incremento de 3.5 dB. Especialmente cuando se obtiene por medio de la potencia máxima de entrada o salida de acuerdo a los sistemas de banda que se tienen de alta eficiencia.

3. La potencia máxima de entrada o salida indicada por el fabricante es de 20 dBm. Una de las razones es que la banda de alta eficiencia tiene una gama de 20 dBm menor que la amplificación de la banda de salida. Una de las razones es que la banda de salida es mayor.

2. El ancho de banda nominal es la gama de frecuencias a las que se suministra la amplificación es de 20 dBm menor que la amplificación de la banda de salida. Una de las razones es que la banda de alta eficiencia tiene una gama de 20 dBm menor que la banda de alta eficiencia.

1. La amplitud nominal es la gama de frecuencias a las que se suministra la amplificación es de 20 dBm menor que la banda de alta eficiencia.

debajo del sellado de la moldura plástica. Sujete el cable de la antena para evitar que se despegue del sellado de la moldura plástica.

Si el teléfono móvil es resistente al agua, se puede instalar la antena en la parte trasera del teléfono. Si no es resistente al agua, se recomienda instalar la antena en la parte frontal del teléfono.

Para una instalación de apariencia más profesional, pase el cable de la antena por debajo del sellado de la moldura plástica.

Retire cuidada el sellado de la moldura plástica para permitir que las piezas de la mayoría de los vehículos sin surtido suficientemente pedanadas para ser cerradas en la parte trasera de la antena. El cable de la antena es sujeto detrás de la pieza de la moldura plástica.

El cable de la antena es pegado por el lado contrario del teléfono. Pase el cable de la antena por debajo del teléfono y luego presintonie el teléfono.

La antena exterior debe ser instalada verticalmente. La antena exterior debe ser instalada verticalmente.

Obstáculos, y por lo menos un 15.3 cm de las ventanillas traseras o laterales o del techo corredizo. Para recibir la mejor señal celular, seleccione una ubicación para la antena exterior que esté preferiblemente en el centro del vehículo, a 30.5 cm de distancia de otras antenas, libre de obstáculos, y por lo menos un 15.3 cm de las ventanillas traseras o laterales o del techo corredizo.

Para recibir la mejor señal celular, seleccione una ubicación para la antena exterior que esté preferiblemente en el centro del vehículo, a 30.5 cm de distancia de otras antenas, libre de obstáculos, y por lo menos un 15.3 cm de las ventanillas traseras o laterales o del techo corredizo.

1. Instalar la Antena Exterior

Instalación en Vehículo

Advertencia: No use cubiertas de teléfono que tengan chrome o cuadrigüero otra superficie metálica.

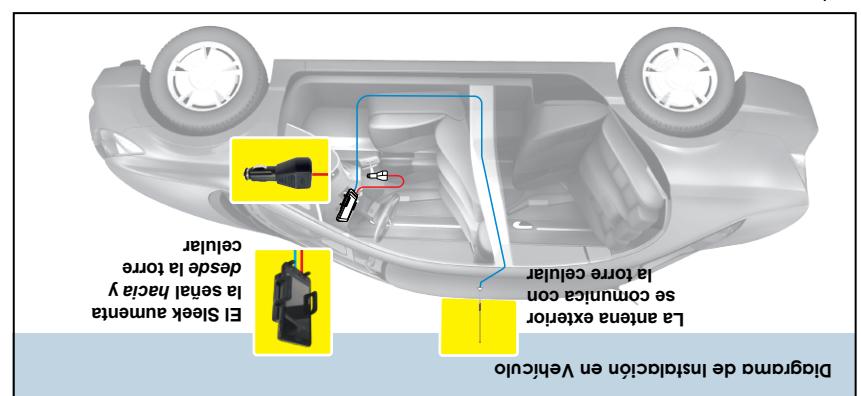

Diagrama de instalación en Vehículo

Nota: El teléfono celular debe estar ubicado en el soporte para funcionar correctamente.

Con el teléfono en el soporte y mantenga una distancia inalámbrica Bluetooth (o un dispositivo de velocidad de comunicación de datos de las redes 2G y 3G). La señal es aumentada por el Sileek y envía a través de la torre celular la señal es recibida de forma inalámbrica y aumentada por el Sileek, y transmida de regreso a la torre celular a través de la antena exterior.

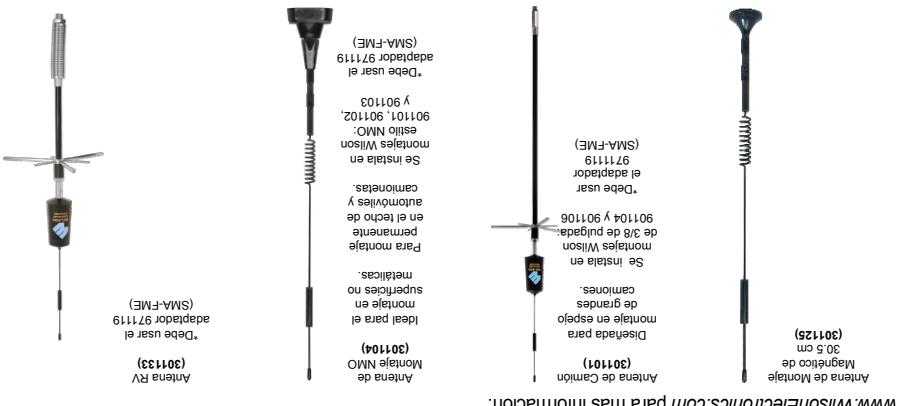

Su amplificador Sileek de Wilson Electronics ha sido diseñado especialmente para mejorar significativamente el rendimiento de su teléfono. Junto con una antena exterior, el circuito del Sileek posee la tecnología más avanzada y estable para aumentar la señal de su teléfono móvil.

Funcionamiento

Velocidades de comunicación de datos de las redes 2G y 3G. La velocidad de la torre celular. El Sileek reduce las descargas y las llamas interrumpidas y aumenta las velocidades de comunicación de datos de las redes 2G y 3G.

General

Puede haber variación en la apariencia de los dispositivos y accesorios.

Además de la conveniente mini antena magnética de montaje que puede haber si lo incluida en su equipo, Wilson Electronics ofrece una amplia variedad de antenas exteriores para ayudarte a personalizar tu teléfono para una aplicación específica. Todos los modelos mostados disponibles duplican la potencia a través de un amplificador para una señal más fuerte. Consulte a su distribuidor o visite www.WilsonElectronics.com para más información.

Note: Si ordena el producto #81525, el paquete solo incluye el Soporte Amplificador Inalámbrico Sileek, fuente de energía y soporte de montaje.

Dentro del Paquete:

Puede haber variación en la apariencia de los dispositivos y accesorios.

Nota: Este manual contiene información importante de operación. Por favor lea y siga las instrucciones del manual. El no cumplimiento de las instrucciones puede causar daños a su teléfono.

Sleek para aumentar la potencia de su teléfono. Para alcanzar los mejores resultados use un auricular Bluetooth® o un dispositivo que se conecte directamente al teléfono. El teléfono debe estar ubicado en el soporte de Sleek para aumentar la potencia de su teléfono.
